Figures

1. The first figure shows the results of the first experiment. The data indicates that the treatment group performed significantly better than the control group across all measured variables. This suggests that the intervention was effective in improving performance.

2. The second figure displays the results of the second experiment. The data shows a similar trend to the first experiment, with the treatment group outperforming the control group. However, the magnitude of the improvement was slightly lower than in the first experiment.

3. The third figure presents the results of the third experiment. The data indicates that the treatment group continued to perform better than the control group, although the difference was not as statistically significant as in the previous experiments.

4. The fourth figure shows the results of the fourth experiment. The data suggests that the treatment group's performance was maintained, but the control group showed some improvement, narrowing the gap between the two groups.

5. The fifth figure displays the results of the fifth experiment. The data indicates that the treatment group's performance was stable, while the control group's performance improved further, resulting in a smaller difference between the two groups.

6. The sixth figure presents the results of the sixth experiment. The data shows that the treatment group's performance was consistent, but the control group's performance continued to improve, further reducing the gap between the two groups.

7. The seventh figure shows the results of the seventh experiment. The data indicates that the treatment group's performance was stable, while the control group's performance improved significantly, resulting in a very small difference between the two groups.

8. The eighth figure displays the results of the eighth experiment. The data suggests that the treatment group's performance was consistent, but the control group's performance improved further, narrowing the gap between the two groups.

9. The ninth figure presents the results of the ninth experiment. The data indicates that the treatment group's performance was stable, while the control group's performance improved significantly, resulting in a very small difference between the two groups.

10. The tenth figure shows the results of the tenth experiment. The data suggests that the treatment group's performance was consistent, but the control group's performance improved further, narrowing the gap between the two groups.
